

# UPGRADING to RNI 4.1

INFORMATION AND EDUCATION FOR SENSUS CUSTOMERS UPGRADING TO RNI 4.1

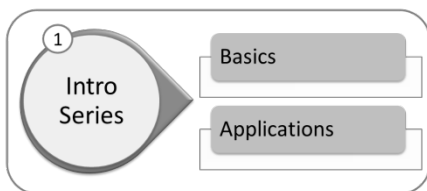

## DESCRIPTION

For Customers upgrading from any previous releases of the RNI to RNI 4.1, or are considering doing so in the near future, the following information and education is provided to help customers understand the changes in the new release.

\*Note: Because RNI 4.1 is a significant departure from previous versions, it is therefore, recommended customers think about RNI 4.1 as a new application all together, rather than focusing on all the differences between their current solution and RNI 4.1. While education materials do exist explaining the differences between stepped versions (e.g., 2.2.4 to 3.1, 3.2 to 3.3, etc.), called *Delta*, it is far easier to think of the upgrade as a new solution having the same functionality and capabilities of its predecessors, and much more.

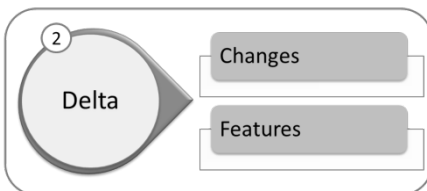

## 1. WHERE TO START - THE INTRODUCTORY SERIES

The Introductory Series familiarizes the student with the basics of the FlexNet communication network, its components and applications. While upgrading customers may already be familiar with the information covered in the FlexNet and RNI overview modules, focus should instead be on the Device Manager and Roles and Responsibilities modules. Experiencing the latter module provides an understanding of the organization of Sensus' core role-based education.

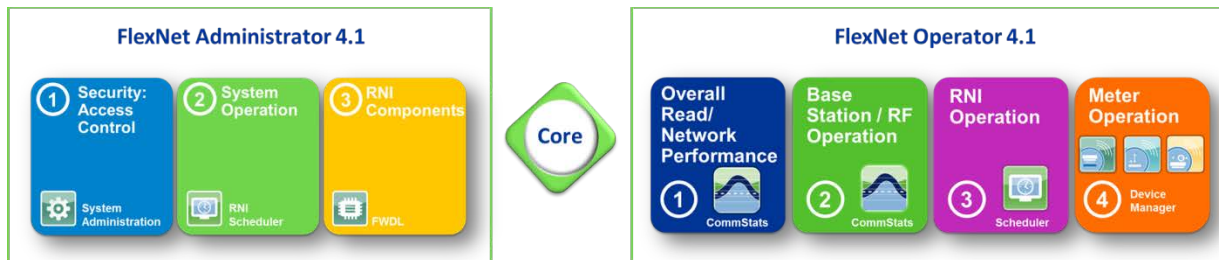

## 2. DELTA MODULES

If you are a customer upgrading from a 3.x version, the Delta modules provide a general understanding of the differences, and summarize the changes and features between RNI releases. Delta content includes descriptions of new features, application changes, and any relevant procedures for performing new tasks associated with the release. Job Aids are also available to assist in transitioning tasks from the legacy interface and MDMIF commands to RNI 4.1.

## 3. SYSTEM ADMINISTRATOR & OPERATOR ROLE-BASED eLEARNING

And finally, upgrading customers may look at easily accessible eLearning modules that serve as the foundation for Sensus' role-based customer training. Customers can partake in the associated materials of its role-based education with a focus on roles and those responsibilities typically assigned to the caretakers - *Administrators* and *Operators* - of the FlexNet communication network. By reviewing the tasks associated with these roles of monitoring and maintaining a FlexNet solution, experienced customers can see even more of the changes found in RNI 4.1.
